#### DIRECTIONS FOR USE ON ORNAMENTAL PLANTS

CROP	PESTS	PRODUCT RATE	SPECIAL INSTRUCTIONS
Ornamental Plants Including: Bedding Plants Flowering Plants Foliage Plants Ground Covers Non-Bearing Fruit Trees Non-Bearing Nut Trees Ornamentals Ornamental Trees Shrubs	Spider Mites Including: Citrus Red Mite European Red Mite Lewis Spider Mite Pacific Spider Mite Southern Red Mite Spruce Spider Mite Two-Spotted Spider Mite	8 to 16 oz/100 gals  4 to 8 packets/100 gals  16 to 32 oz/A  (Each water soluble packet contains 2 oz of <i>TetraSan</i> 5 WDG.)	Mix with sufficient water and apply as a foliar spray to obtain uniform coverage.  <i>TetraSan</i> 5 WDG kills mite eggs (ovicidal) and nymphs, but not adult mites. For best control, apply at first sign of infestation and before large numbers of adult mites are present. Make a second application if necessary, but no sooner than 14 days after the first application. Do not apply <i>TetraSan</i> 5 WDG more than two times per cropping season or within a six month period.  <i>TetraSan</i> 5 WDG is transovarial, meaning that treated adult mites will not produce viable eggs.  Use higher rates for moderate to heavy infestations, especially with dense plant canopies.  If rapid control (< 7 days) of adult mites is required, apply <i>TetraSan</i> 5 WDG in combination with a contact adulticide.

**NOTE:** Since ornamental varieties are numerous, constantly changing, and may react differently to *TetraSan* 5 WDG and tank mixtures, test the product(s) on a small scale before making large-scale applications.
