TIMING TO ALFALFA

Chateau SW may be applied to established alfalfa with a maximum amount of regrowth of 6 inches or less for the preemergence control of the weeds listed in Table 1, Weeds Controlled by Residual Activity of *Chateau* SW. Application to alfalfa with greater than 6 inches of regrowth may result in unacceptable crop injury.

TIMING TO WEEDS

Preemergence – Preemergence To Weeds

Apply *Chateau* SW before alfalfa regrowth exceeds 6 inches in height for the preemergence control of weeds listed in Table 1, Weeds Controlled by Residual Activity of *Chateau* SW. Applications should be made as soon as possible after cutting and removing alfalfa to minimize injury to alfalfa regrowth.

Read tank mix product label for rates and weeds controlled. Always read and follow label directions for all tank mix products before using. The most restrictive labeling of any tank mix product must be followed. *Chateau SW*, when applied according to label use directions, will control the weeds listed in Table 1, Weeds Controlled by Residual Activity of *Chateau SW*. This label makes no claims concerning control of other weed species.
