#### GENERAL RESTRICTIONS AND LIMITATIONS

- Use only on no-till or minimum tillage fields where last year's crop residue has not been incorporated into the soil.
- Do not perform any tillage operation after application or residual weed control will be reduced.
- Corn must be planted between 14 and 30 days after application unless the application is made as part of a Fall burndown program.

#### Burndown Use Directions – For Preplant Applications in Field Corn

*Chateau* SW, applied as part of a burndown program, may be used for residual weed control, as well as to assist in postemergence burndown of many weeds where field corn will be planted directly into the residue of the previous year. For control of emerged weeds, *Chateau* SW must be applied with an appropriate burndown tank mix partner listed in Table A, *Tank Mix Partners for Burndown and/or Residual Control of Weeds in Field Corn*. To ensure thorough coverage, use a minimum of 15 gallons of spray solution per acre. Refer to tank mix partner's label for recommended application pressure and recommended adjuvant systems.

#### TANK MIXES

*Chateau* SW may be tank mixed with the herbicides listed in Table A, *Tank Mix Partners for Burndown and/or Residual Control of Weeds in Field Corn*, for pre-plant burndown applications. Refer to tank mix partner's label for adjuvant recommendations.
