

FIFRA Section 2(ee) Recommendation

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATES OF CA AND HI

Safari® 20 SG INSECTICIDE

FOR CONTROL OF MYOPORUM THRIPS IN GREENHOUSE, NURSERY, AND
OUTDOOR LANDSCAPES

EPA Reg. No. 33657-16-59639
FIFRA SECTION 2(ee) RECOMMENDATION

DIRECTIONS FOR USE

This recommendation is made as permitted under Section 2(ee) and has not been submitted to or approved by the EPA. Always read and follow all label directions when using any pesticide.

This 2(ee) bulletin contains directions for use which do not appear on the EPA registered label of Safari® 20 SG Insecticide. Please refer to the production label for additional information.

Safari 20 SG Insecticide may be applied to control Myoporum Thrips in Ornamental Plantings.

Application Method	Safari 20 SG Insecticide Application Rate	Application Recommendations & Comments
Foliar or Broadcast Spray	4 to 8 oz/100 or 8 to 12 oz/A	Apply as soon as pest appears. Treatment will protect new plant growth from feeding damage, but will not correct preexisting plant damage from thrips feeding.
Soil Drench (individual plants)	6 grams per foot of shrub height or 6 to 12 grams per inch of tree diameter	Preventive applications: Application before plant flushes new growth so as to protect it from insect damage. Curative (after infestation) applications: Control may not be evident for several days following soil application and basal trunk sprays. Speed of control will depend on level of plant activity.
Broadcast spray to soil of plant beds	1 oz/1000 sq ft	Soil Drench: apply 1-4 pints of dilute solution to base of soil around each plant. Broadcast spray: Apply over the top of plant beds in a water volume sufficient to move product to soil surface.
Basal Trunk Spray (individual plants)	12 oz/gallon	If necessary, irrigate after application to move product off of foliage and into upper root zone of soil. Basal trunk spray: Spray bark on lower 4.5 feet of trunk just to to the point of runoff. Use of a non-ionic surfactant at 0.25% v/v may improve control.

Use Precautions:

1. Do not apply more than 2.7 lbs of Safari 20 SG Insecticide per acre.

Follow all applicable directions, restrictions and precautions on the EPA-registered labels. This labeling must be in the possession of the user at the time of pesticide application.

It is a violation of Federal law to use these products in a manner inconsistent with its labeling.

THIS RECOMMENDATION EXPIRES DECEMBER 31, 2012
