STORAGE AND DISPOSAL
Do not store near food, feed, or where children can come in contact with it. Discard empty containers in accordance with local waste disposal regulations.

FIRST AID

IF IN EYES: if contact occurs, wash with water for 15 minutes. Seek medical attention.

IF INHALED: get into fresh air. If not improved, seek medical attention.

IF SWALLOWED: do not induce vomiting. Do not give anything by mouth to an unconscious person. Call a poison control center or doctor immediately for treatment advice. Have the product container or label with you when calling a poison control center or doctor.

STORAGE

Store in a cool, dry location away from exposure to direct sunlight or extreme temperature variations. Do not store in a location where temperatures are above 120°F (49°C) or where temperatures are below 32°F (-0°F) or where the product is exposed to direct sunlight or freezing conditions.

DESCRIPTION:

This product is a multi-purpose insecticide that provides control of biting and sucking lice, stable flies, horse flies, deer flies, face flies, sheep "tick" or ked, and fomites. It is designed for indoor and outdoor use and is effective against a wide range of pests, including those that may pose a threat to human and animal health. It is formulated to provide residual control for several weeks, ensuring long-lasting protection.

USE

For the control of biting and sucking lice on cattle, horses, sheep, goats, swine, and poultry.

USES:

• For use in stored products with high moisture content.
• For use in feed troughs.
• For use in cleaning up around used feed troughs.
• For use in cleaning up around the used feed troughs of livestock.
• For use in cleaning up around the used feed troughs of livestock.

FOR USE IN STORAGE SITES:

1) For effective control of stable flies, horse flies, deer flies, and face flies, dilute at the rate of 2 to 3 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 bushels of stored product.

2) For effective control of birds, dilute at the rate of 2 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 square feet on walls, floors, ceilings, and partition boards of bins, paying particular attention to material lodged in the cracks and crevices. All of the debris should be removed from the bin hoppers. All storage areas and conveying systems should be thoroughly cleaned after use. See pages 4 and 5 for first aid and precautionary statements.

3) For effective control of biting and sucking lice on cattle, horses, sheep, goats, swine, and poultry, dilute at the rate of 2 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 square feet on walls, floors, ceilings, and partition boards of bins, paying particular attention to material lodged in the cracks and crevices. All of the debris should be removed from the bin hoppers. All storage areas and conveying systems should be thoroughly cleaned after use. See pages 4 and 5 for first aid and precautionary statements.

4) For effective control of birds, dilute at the rate of 2 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 square feet on walls, floors, ceilings, and partition boards of bins, paying particular attention to material lodged in the cracks and crevices. All of the debris should be removed from the bin hoppers. All storage areas and conveying systems should be thoroughly cleaned after use. See pages 4 and 5 for first aid and precautionary statements.

5) For effective control of biting and sucking lice on cattle, horses, sheep, goats, swine, and poultry, dilute at the rate of 2 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 square feet on walls, floors, ceilings, and partition boards of bins, paying particular attention to material lodged in the cracks and crevices. All of the debris should be removed from the bin hoppers. All storage areas and conveying systems should be thoroughly cleaned after use. See pages 4 and 5 for first aid and precautionary statements.

6) For effective control of biting and sucking lice on cattle, horses, sheep, goats, swine, and poultry, dilute at the rate of 2 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 square feet on walls, floors, ceilings, and partition boards of bins, paying particular attention to material lodged in the cracks and crevices. All of the debris should be removed from the bin hoppers. All storage areas and conveying systems should be thoroughly cleaned after use. See pages 4 and 5 for first aid and precautionary statements.

7) For effective control of biting and sucking lice on cattle, horses, sheep, goats, swine, and poultry, dilute at the rate of 2 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 square feet on walls, floors, ceilings, and partition boards of bins, paying particular attention to material lodged in the cracks and crevices. All of the debris should be removed from the bin hoppers. All storage areas and conveying systems should be thoroughly cleaned after use. See pages 4 and 5 for first aid and precautionary statements.

8) For effective control of biting and sucking lice on cattle, horses, sheep, goats, swine, and poultry, dilute at the rate of 2 fluid ounces per gallon of water and apply at the rate of 1 to 2 gallons per 1,000 square feet on walls, floors, ceilings, and partition boards of bins, paying particular attention to material lodged in the cracks and crevices. All of the debris should be removed from the bin hoppers. All storage areas and conveying systems should be thoroughly cleaned after use. See pages 4 and 5 for first aid and precautionary statements.
Agricultural use requirements

**Crop Protection EC**

- Shoes plus socks; and equipment (PPE), and restricted-entry interval. The requirements in this box only apply to agricultural pesticides. It contains requirements for training, decontamination, and restricted entry periods. The application of agricultural pesticides is subject to environmental and regulatory conditions. Before making widespread applications of Evergreen® Crop Protection EC 60-6 in a limited area, treat a limited number of plants and observe for phytotoxicity over a 10 day period.

**GROWING CRUSP (OUTDOORS AND IN GREENHOUSES):**

- The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**PROPER MOUNTING AND USE:**

- Evergreen® Crop Protection EC 60-6 must be applied with an air induction sprayer, a conventional hydraulic sprayer, or an ULV fogger capable of producing particles of aerosol size. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE IN CANNERIES:**

- To kill accessible, exposed stages of Almond Moths, Angoumois Grain Moths, Cadelle Beetles, and other pests found in canned products, the use of this product must be carefully controlled to avoid contamination of edible products.

**DIRECT SPRAY TO FRUITS IN BASKETS, CRATES, OR PACKS:**

- The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE ON HARVESTED FRUITS AND VEGETABLES:**

- 30 minutes after treatment. Ventilate the area before reoccupying. Repeat treatment if necessary. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**DIRECTIONS FOR USE:**

- Treat 1 gallon of water or deodorized base oil on rice, barley, beans, birdseed, and dehydrated vegetable products. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE ON STORED PRODUCTS:**

- The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE IN STABLES:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE IN HOMES AND OTHER BUILDINGS:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE ON INSECTS IN STORES:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE ON SEEDS:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE ON VEGETABLES:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE ON BACTERIA AND FUNGI:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE IN FOOD AND NONFOOD AREA OF FOOD PROCESSING PLANTS:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.

**FOR USE IN CANNERIES:**

- Treat just before calving, or before any product with label prohibitions against mixing. The use of this product in food processing or food handling establishments should be avoided. In situations where food processing or food handling is unavoidable, the use of this product must be carefully controlled to avoid contamination of edible products.
