

# TECHNICAL INFORMATION BULLETIN

---

## OVERVIEW

---

League<sup>®</sup> MVP Herbicide is an unbeatable play against sedge, broadleaf, aquatic and grass weeds in water-seeded rice in California. It offers solid preemergence residual foundation defense of your rice yield potential.

## TECHNICAL FEATURES

---

- Strikes weeds as they emerge providing early residual control
- Full spectrum of sedge, broadleaf, aquatic and grass weeds; to name a few: smallflower umbrellaplant, ricefield bulrush, redstems and sprangletop and suppression of: Watergrass (Early and Late)
- Single application uniquely controls full spectrum of weeds
- Well-matched play with other foliar weed control

## MODE OF ACTION

---

Dual modes of action allows switch-hit on full spectrum of weeds. *League MVP* attacks weeds by inhibiting two important plant metabolic pathways: acetolactate synthase (amino acid synthesis) and lipid synthesis.

## WEED SPECTRUM

---

Weeds Controlled	Weeds Suppressed
Bulrush, Ricefield	Watergrass, Early
Bulrush, River	Watergrass, Late
Burhead	
Ducksalad	
Naiads	
Pondweed, American	
Redstems	
Umbrellaplant, Smallflower	
Sprangletop	
Waterhyssops	
Waterplaintain, Common	

## LABELED CROPS

---

*League MVP* Herbicide is labeled on rice in California.

## FORMULATION

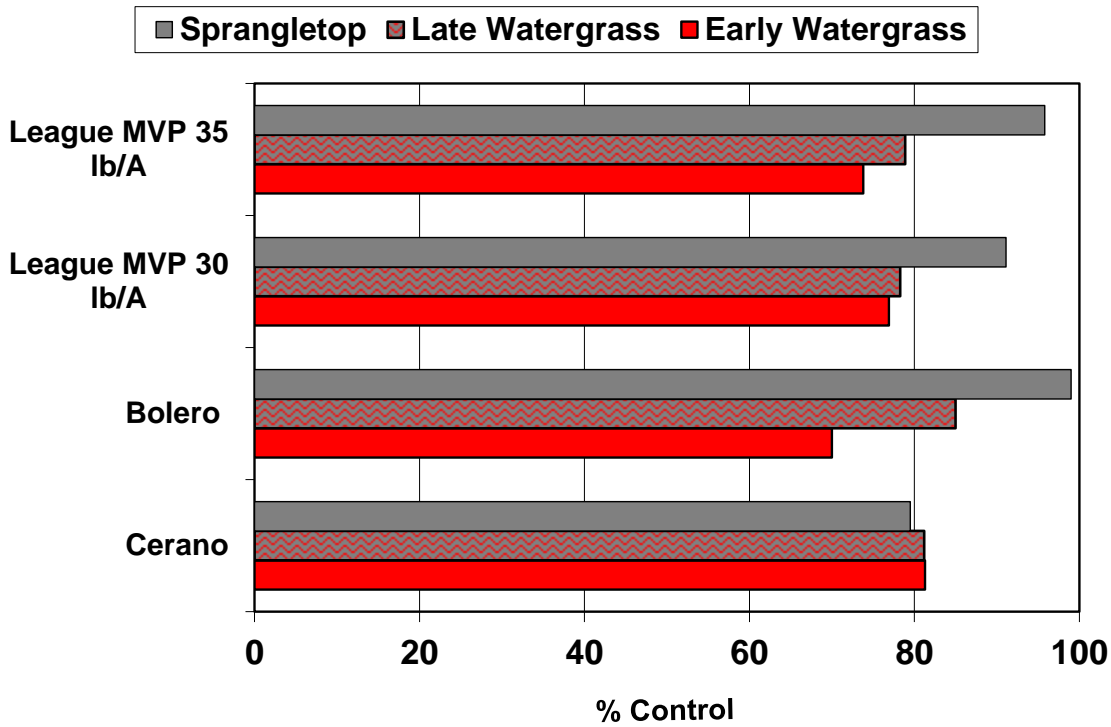

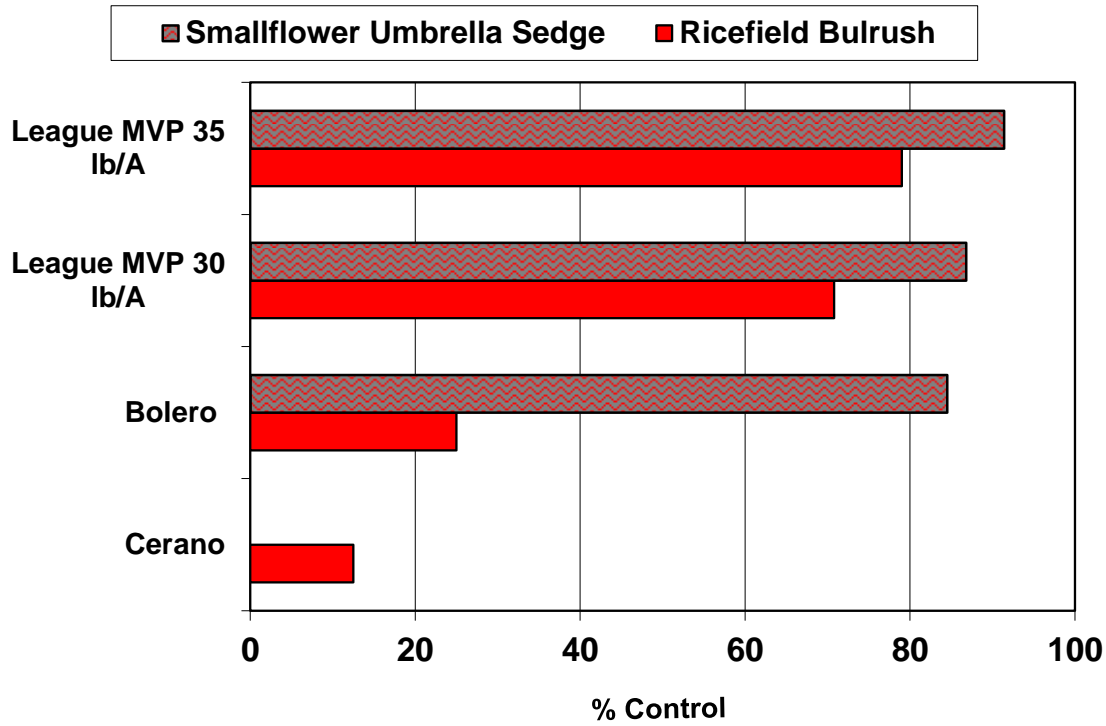

---

- Granule with rapid dispersibility ~ quickly dissolves in water
- High uniformity promoting consistent material application
- Spherical shape delivers consistent flowability, durable, robust handling

## USE DIRECTIONS

---

- Rate: 30 or 35 lbs/A
  - Timing to crop: Apply after flooding when rice is in the expanded two-leaf stage (first open leaf)
  - Timing to weeds: preemergence to ½" inch or less in height
  - Do not drain *League MVP*-treated field for a minimum of 30 days after treatment, except where state regulations may allow shorter water holding periods for hydrologically isolated fields or for fields associated with systems designed to isolate discharged water from natural bodies of water.
  - Water level in the checks should be maintained at 3 – 4 inches with no exposed soils. Water flow should be maintained at a minimum during and up to 4 days after treatment for good weed control.
-
