

Senstar® Insecticide: Boost Your Insect Control

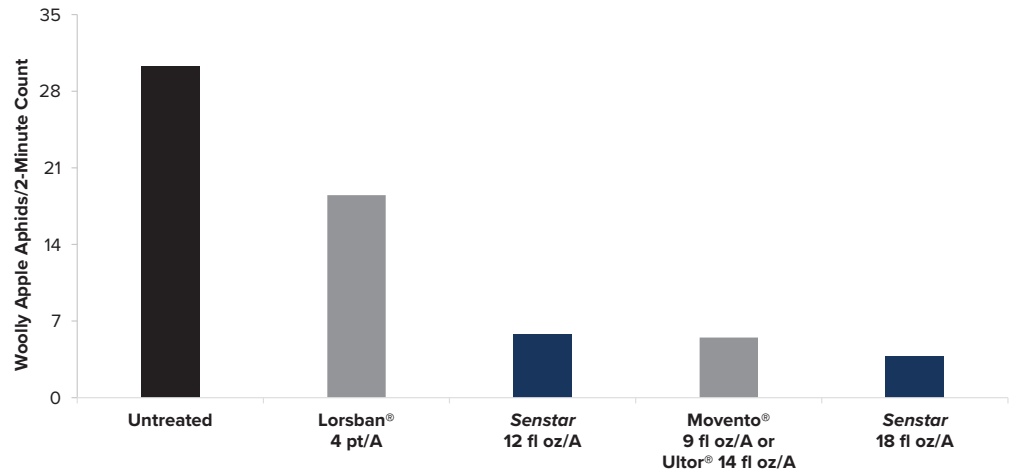

New Senstar® Insecticide brings two effective modes of action for fast, long-lasting control of soft-bodied insects including aphids (woolly apple aphid, rosy apple aphid and green apple aphid), scales (San Jose and lecanium) and pear psylla. With contact, translaminar and systemic activity that affects all life stages of targeted pests for long-lasting control, *Senstar* helps ensure high-quality fruit from the start.

- ▶ Controls target pests at all life stages, including eggs
- ▶ Provides dual systemic activity to control pests moving into new vegetative growth as well as pests that can feed in already developed foliage
- ▶ Delivers fast translaminar movement to reach target pests that feed on the underside of leaves
- ▶ Selectively targets harmful insect pests with minimal impact on beneficial arthropods

Senstar Control of Woolly Apple Aphids at Petal Fall

Senstar significantly outperformed the grower standard on woolly apple aphid control.

Source: E. Beers, WSU-TFREC, Rock Island, WA

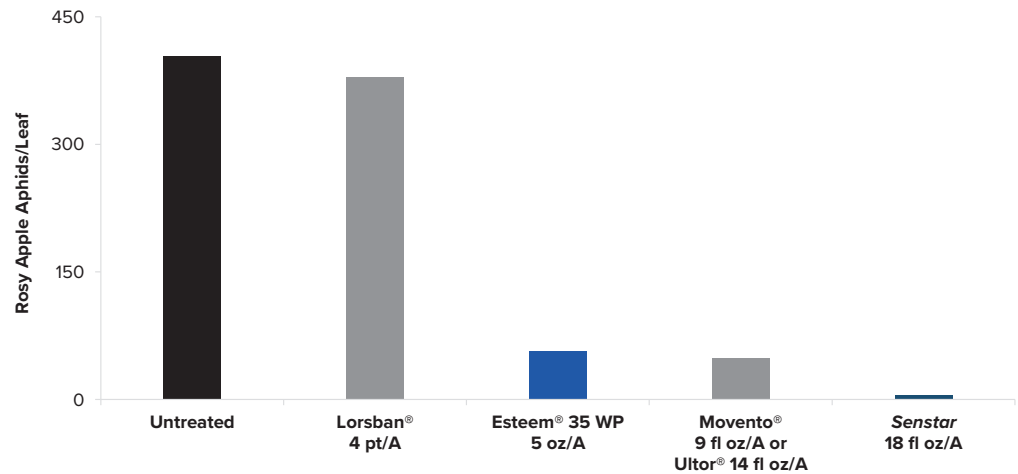

Senstar Control of Rosy Apple Aphids*

Senstar demonstrated strong rosy apple aphid control to boost protection.

*Cumulative aphid-days from timed colony counts

Senstar Control of San Jose Scale

Senstar provides excellent control of San Jose scale at 18 fl oz/A.

Means followed by the same letters are not significantly different (P<0.10).

Source: D. Biddinger, Pennsylvania State University; Biglerville, PA

How To Use

Rate	12–18 fl oz/A <ul style="list-style-type: none"> Do not apply more than 18 fl oz/A per application Do not make more than two applications per year Do not apply more than 36 fl oz/A per year
Timing	Petal fall
Method	Ground application
PHI	45 days

Other Important Information

- ▶ Minimum interval between applications is 14 days
- ▶ For control of San Jose scale west of the Rocky Mountains, including all of Colorado, Montana, New Mexico and Wyoming, apply immediately after petal fall, followed by a second application 14 to 21 days later
- ▶ For control of San Jose scale east of the Rocky Mountains, apply immediately after petal fall. A second application may be necessary under heavy infestation pressure or where difficult control conditions exist.

Integrated Pest Management (IPM)

Senstar is highly suited for use in IPM programs because it shows high selectivity to harmful insect species with no hazardous effects on many beneficial insects.
