

## MycoApply® EndoFuse™

MycoApply® EndoFuse™ uses four unique species of mycorrhizal fungi designed to help your rice crop stand up to stress and protect yield.

- ▶ **Improved Nutrient Access and Uptake**—Hyphae can access small areas that root hairs can't. They also produce enzymes to release nutrients that are tied up in the soil.
- ▶ **Improved Soil Structure**—Hyphae produce glomalin, which creates stable soil aggregates for better soil structure
- ▶ **Expanded Root Absorption**—Hyphae extend from roots to access areas inaccessible to bigger roots

### MycoApply EndoFuse: Stronger Plants

\*Base seed treatment with MycoApply EndoFuse. Summary of 25 locations. Data from AR, LA and MS.

### How To Use

<b>Rate</b>	Delivers 90,000 propagules/A	
	Conventional/variatal rice: <ul style="list-style-type: none"> <li>• Apply 0.19 fl oz/cwt</li> <li>• Assume seeding rate of 70 lb/A</li> </ul>	Hybrid rice: <ul style="list-style-type: none"> <li>• Apply 0.65 fl oz/cwt</li> <li>• Assume seeding rate of 20 lb/A</li> </ul>
<b>Application Method</b>	<ul style="list-style-type: none"> <li>• Apply as seed treatment</li> <li>• Can also be used with other seed treatment products like NipsIt® SUITE Rice System</li> </ul>
