

Top 10 Reasons to Use NEW Perpetuo™ Herbicide

1

Burndown and Residual Control: Perpetuo™ Herbicide is a new premix of proven chemistries (flumiclorac pentyl and pyroxasulfone) with both burndown and residual weed control.

2

More Activity: Pyroxasulfone is the newest molecule in its chemical group and works on more sites of action in plants than other Group 15 herbicides.

3

Enhanced Broadleaf Control: *Perpetuo* will strengthen the overall broadleaf spectrum of control with tank mixes of broad spectrum burndown herbicides.

4

Increased Flexibility: *Perpetuo* allows flexible application at a convenient low use rate and can be applied up to V6 in soybeans.

5

Faster Acting: *Perpetuo* needs very little water to activate, making it more effective and providing faster residual control than encapsulated products.

6

Increased Crop Safety: No antagonism with Select Max® Herbicide with Inside Technology™ and other clethodim products.

7

Extended Residual Control: Utilizing *Perpetuo* as an overlapping residual will extend the residual control of waterhemp and Palmer amaranth to canopy.

8

Broader Control: *Perpetuo* will provide control of velvetleaf and helps in the control of vine-type weeds like morningglory.

9

Buy Now, Pay Later: Now available for grower financing through John Deere Financial for 0%.
